

Housing

Location: 2nd and West Church | Designer: Archie Carpenter

The HOUSING concept will be a new home for the energy conscience "twenty something's" to dwell in. Units are manufactured off site and erected onsite. The dimension of the units allow for over the road transportation to anywhere. The two halves come together on site and lifted into position. The project will allow for a "trombe roof" to heat the air that the units will draw from to heat and cool the units. The exterior skin will help keep the solar gain in the units.
