

Wine Bar[n]

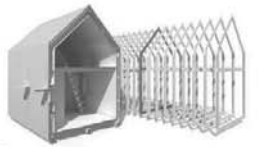

Location: SW 5th & Church | Designer: Meghan DeHarty

This adaptive re-use design challenges the architectural integrity of the metal shed typology and offers new value to Albion's original fire station. The Wine Bar[n] is economically and thermally insulated with straw bale construction and is externally wrapped in heat treated timber for solar protection. The project is a design extension of the previously proposed Winery and Microbrewery and may be used for alternative events.
